BookletChartTM

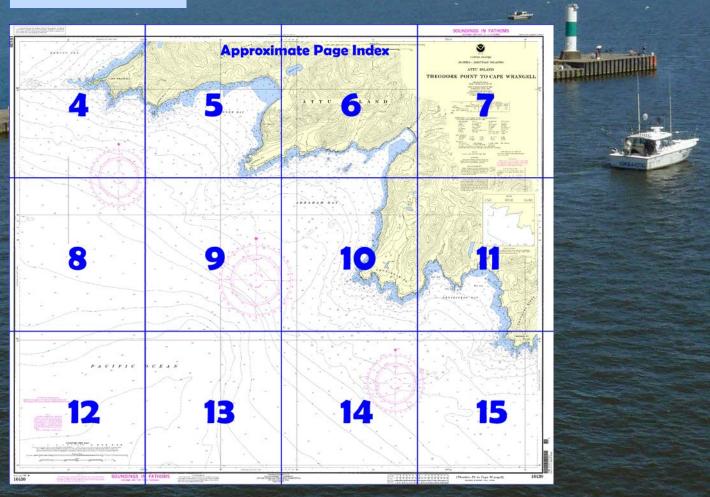

A reduced-scale NOAA nautical chart for small boaters When possible, use the full-size NOAA chart for navigation.

- Complete, reduced-scale nautical chart
- Print at home for free
- Convenient size
- Up-to-date with Notices to Mariners
- Compiled by NOAA's Office of Coast Survey, the nation's chartmaker

Published by the National Oceanic and Atmospheric Administration National Ocean Service Office of Coast Survey

What are Nautical Charts?

Nautical charts are a fundamental tool of marine navigation. They show water depths, obstructions, buoys, other aids to navigation, and much more. The information is shown in a way that promotes safe and efficient navigation. Chart carriage is mandatory on the commercial ships that carry America's commerce. They are also used on every Navy and Coast Guard ship, fishing and passenger vessels, and are widely carried by recreational boaters.

What is a BookletChart[™]?

This BookletChart is made to help recreational boaters locate themselves on the water. It has been reduced in scale for convenience, but otherwise contains all the information of the full-scale nautical chart. The bar scales have also been reduced, and are accurate when used to measure distances in this BookletChart. See the Note at the bottom of page 5 for the reduction in scale applied to this chart.

Whenever possible, use the official, full scale NOAA nautical chart for navigation. Nautical chart sales agents are listed on the Internet at http://www.NauticalCharts.NOAA.gov.

This BookletChart does NOT fulfill chart carriage requirements for regulated commercial vessels under Titles 33 and 44 of the Code of Federal Regulations.

Notice to Mariners Correction Status

This BookletChart has been updated for chart corrections published in the U.S. Coast Guard Local Notice to Mariners, the National Geospatial Intelligence Agency Weekly Notice to Mariners, and, where applicable, the Canadian Coast Guard Notice to Mariners. Additional chart corrections have been made by NOAA in advance of their publication in a Notice to Mariners. The last Notices to Mariners applied to this chart are listed in the Note at the bottom of page 7. Coast Pilot excerpts are not being corrected.

For latest Coast Pilot excerpt visit the Office of Coast Survey website at http://www.nauticalcharts.noaa.gov/nsd/searchbychart.php?chart=164 https://www.nauticalcharts.noaa.gov/nsd/searchbychart.php?chart=164 https://www.nauticalcharts.noaa.gov/nsd/searchbychart.php?chart=164 https://www.nauticalcharts.noaa.gov/nsd/searchbychart.php?chart=164 https://www.nauticalcharts.noaa.gov/nsd/searchbychart.php?chart=164 https://www.nauticalcharts.noaa.gov/nsd/searchbychart.php?chart=164 https://www.nauticalcharts.noaa.gov/nsd/searchbychart.php?chart=164 <a href="https://www.nauticalcharts.noaa.gov/nsd/searchbycharts.noaa.gov/nsd/search

(Selected Excerpts from Coast Pilot)
Cape Wrangell is the westernmost
extremity of Attu Island. The cape appears
as a string of rocky, rugged islets, about 150
feet high, reaching out from a mountainous
ridge. This ridge is bold and steep with a
summit about 1,800 feet high.

On **Peaked Island**, just off the cape, a natural bridge and buttress forms an opening which has the deceptive appearance of a large patch of snow against the dark rocks. This is a distinctive landmark

to vessels N and S of the cape.

A rock 3 feet high is about 0.3 mile W of Peaked Island. Breakers usually mark this rock.

Cape Wrangell should be rounded at 1.5 miles distance. At maximum current the heavy tide rips extend for about 3 miles off the cape. SE of Cape Wrangell, inshore currents were observed setting E at times. Cape Wrangell is a Steller sea lion rookery site. There is a 3-mile vessel exclusionary buffer zone around the rookery. (See **50 CFR 223.202**, chapter **2**, for limits and regulations.)

Between Cape Wrangell and Etienne Head, the mountainous coastline is indented by two coves. A shingle beach is at the N end of **Wrangell**Cove, the E of the two. Small boats have made landings on this beach.

Etienne Head is a moderate-sized headland about 120 feet high. A group of large black rocks and reefs are off the headland.

Etienne Bay is the first large bay E of Cape Wrangell. It is broad and open, and has high mountains on both sides and a long sandy beach at its head. A low valley and a pass run inland from this beach. The bay is clear of dangers to navigation except for the reefs and kelp patches that border the E and W shores. The W shore should be given a berth of at least 0.5 mile. The bottom shoals gradually as the bay is entered. Deep-draft vessels can anchor in 14 fathoms in midbay about 1 mile from the head. The bottom is fine green sand and pebbles and has fair holding properties.

A perpendicular-sided table-topped shelf about 500 feet high is on the E shore 1.5 miles from the head of the bay. This makes a good landmark from seaward.

Etienne Bay is wide open to S and W storms, and because of the lack of protection is not recommended as an anchorage except in N or E weather.

Mikhail Point marks the SE approach to Etienne Bay. It is a broad, gently sloping headland with a terrace-sided shoulder near its NW part. A narrow-mouthed cove cuts into the SE tip of Mikhail Point. This cove offers good protection to small boats, but the swinging room is very limited.

Mikhail Point should be given a berth of at least 0.5 mile by deep-draft vessels.

Abraham Bay, E of Mikhail Point, is the second major bay E of Cape Wrangell. It is wide-mouthed, narrowing to an inner arm at the NE end. This arm has parallel shores and a short, sandy beach at its head. The mountains surrounding Abraham Bay rise steeply from the shoreline to between 1,500 and 2,000 feet high. The steep, rugged slopes of the inner arm give it a fiord-like appearance.

An unusually large waterfall on the NW shore of Abraham Bay, 2.5 miles E of Mikhail Point, is a conspicuous landmark, even to ships offshore. A group of rocks and reefs mark the W side of the approach to the inner arm of Abraham Bay. The highest of these, a steep-sided rock 48 feet high, is an excellent landmark for vessels entering the bay. Vessels should steer a course to pass not less than 0.5 mile off this rock, rounding it at that distance and then heading toward the middle of the sand beach at the head of the inner arm. Anchorage is found E of the innermost low flat reef in 13 fathoms, gravel bottom. The holding properties are only fair. This anchorage offers some protection from N and E storms, but is exposed to the W and S. In addition, fierce strong winds often draw through the inner arm, when no winds are noticeable off the approaches to the bay.

The E shore is clear of dangers except for the almost continuous string of reefs close inshore.

VHF Marine Radio channels for use on the waterways:

Channel 6 – Inter-ship safety communications.

Channel 9 – Communications between boats and ship-to-coast.

Channel 13 – Navigation purposes at bridges, locks, and harbors.

Channel 16 – Emergency, distress and safety calls to Coast Guard and others, and to initiate calls to other

vessels. Contact the other vessel, agree to another channel, and then switch.

Channel 22A – Calls between the Coast Guard and the public. Severe weather warnings, hazards to navigation and safety warnings are broadcast here. Channels 68, 69, 71, 72 and 78A – Recreational boat channels.

Getting and Giving Help — Signal other boaters using visual distress signals (flares, orange flag, lights, arm signals); whistles; horns; and on your VHF radio. You are required by law to help boaters in trouble. Respond to distress signals, but do not endanger yourself.

Distress Call Procedures

- Make sure radio is on.
- Select Channel 16.
- Press/Hold the transmit button.
- Clearly say: "MAYDAY, MAYDAY, MAYDAY."
- Also give: Vessel Name and/or Description; Position and/or Location; Nature of

Emergency; Number of People on Board.

- · Release transmit button.
- Wait for 10 seconds If no response Repeat MAYDAY call.

HAVE ALL PERSONS PUT ON LIFE JACKETS!

NOAA Weather Radio All Hazards (NWR) is a nationwide network of radio stations broadcasting continuous weather information directly from the nearest National Weather Service office. NWR broadcasts official Weather Service warnings, watches, forecasts and other hazard information 24 hours a day, 7 days a week.
